## RED BOX AI MULTI-EXCHANGE TRADING TECHNOLOGY

Multi-Exchange trading is a form of trading which gets profits from the difference among price of the exchanges

Prices traded on the exchanges are never the same at the same time. This difference is due to the difference of fees such as: Entry fee, floor fee, withdrawal fee, deposit fee, overnight fee ..., each fee will be calculated according to the regulations on each floor.

Although knowing the difference in this fee, Traders can only think about which floor fee is lowest to play, which is most beneficial.

# 3

## RED BOX AI MULTI-EXCHANGE TRADING TECHNOLOGY

In fact, the trader making the right or wrong decision depends largely on the risk factor.

RED BOX AI is created with the goal: Whether the trader loses or wins, he can still keep their profits.

# 3

## RED BOX AI MULTI-EXCHANGE TRADING TECHNOLOGY

**RED BOX AI** will read, compare and calculate ratios and spreads of all prices on the top 10 exchanges which have the largest trading volume. Then the system will statistic and analyze data continuously in second.

According to the reported data, **RED BOX AI** will make a decision to trade the same amount of money on at least two Exchanges at the same time with both BUY and SELL Comeinand so that when closing the comeinand, no matter which comeinand wins, **RED BOX AI** is also the one who gets profits.
